Dear Miss Macpherson,

Regarding your queries, –

R. = Lovell Reeve
H.C. = Hugh Cuming (H)
G. = Geale (R. Geale I think)
W. – I can't place.

These were all purchases & to indicate such I usually adopted:–

P. = purchase
D = donation
Ex. = exchange.

As explained to you yesterday the lists of above are in those green covered containers.

In quite a number replaced with new labels the original label was preserved & attached to underside of the shell board. This applies particularly to the Austln shells & indicate the original determinations of Reeve & others.

Sincerely Yours
Jas A Kershaw

I hope you will locate the card cat. of the Gatliff coll.?

Cable from Flinders Victoria to Low Head
Tasmania

West Cable Repairs

The first fault on the West Cable occurred in 1910 about 20 nauts from Low Head and was repaired by the steamer "Patrol"

The ship laid approximately 4·4 nauts of cable and caused an increase of 0·21 naut in the overall length.

From above information 4·19 nauts of old cable would have been cut out & this would have extended say about 2 nauts on each side of the 20 nauts from Low Head

---

The course of the two cables is recorded on Admiralty Charts & if necessary I may be able to get further details of the nature of bottom & depth at the 20 nauts from Low Head. The depth is thought to be about 30 fathoms
